

SPONSORSHIP PROPOSAL

2026 - 2027

Formula Student: American University of Sharjah

ABOUT US

ABOUT FORMULA STUDENT

Formula Student is a global engineering competition where university teams design, manufacture, and race a formula-style car.

Our team competes in the Electric Vehicle (EV) category, building a fully electric single seater race car. For our team, the project represents an opportunity to translate classroom knowledge into a real engineering system while working collaboratively across multiple disciplines.

Through the design and development of our vehicle, we aim to build expertise in areas such as vehicle dynamics, manufacturing, and testing, while developing strong project management and teamwork skills. Beyond competition, the project reflects our commitment to innovation, practical learning, and representing our university on an international engineering stage.

FSUK COMPETITION

COMPETITION DATE: JULY 2027

Formula Student UK (FSUK) is an international engineering competition held at Silverstone Circuit, where university teams design, build, and race small formula-style cars. Teams are judged on performance, engineering design, cost, and business presentation, making it a test of both technical skill and real-world application.

Silverstone Circuit

COMPETITION FORMAT

The competition evaluates teams through two categories of events:

Dynamic Events

These test the performance and reliability of the car on track.

- **Acceleration** : straight-line speed test
- **Skid Pad** : cornering and handling performance
- **Autocross** : lap time and agility on a short track
- **Endurance** : long-distance race testing reliability and efficiency

Static Events

These evaluate the engineering, cost efficiency, and business viability of the project.

- **Engineering Design** : Assess technical design and innovation
- **Cost & Manufacturing** : production feasibility and budgeting
- **Business Plan Presentation** : commercialization and market strategy

FS-AI COMPETITION

COMPETITION DATE: JULY 2027

Formula Student AI (FS-AI) bridges the engineering skills gap by testing teams on software design, algorithmic performance, hardware cost, and business presentation. Teams compete in either the Automated Driving System (ADS) class, where they design and build their own autonomous vehicle from scratch, or the Dynamic Driving Task (DDT) class, a software-only challenge where teams develop AI and control algorithms for a shared, autonomous-ready vehicle. This combination of technical rigor and commercial viability equips engineers with the exact hands-on experience modern tech and automotive industries demand.

COMPETITION FORMAT

The competition evaluates teams through two categories of events:

Static Events

- Autonomous Design: Evaluates software architecture, algorithms, and system integration.
- Simulation Development: Assesses virtual modeling of sensors, environments, and vehicle dynamics for algorithm validation.
- Real-World AI: Tests understanding of practical deployment challenges via a technical mobility case study.
- Business Plan Presentation: Requires pitching a viable, profitable SAE Level 4 commercial business model.

Dynamic Events

- Trackdrive: A 10-lap endurance run testing mapping resilience and autonomous reliability.
- Autocross / Sprint: A single-lap agility test requiring real-time mapping with zero prior track data.
- Acceleration: A straight-line speed test.
- Skidpad: Lateral tracking and cornering performance

PROGRESS GALLERY

All designs were made by AUS Racing for the Formula Student. These are not the final designs and will undergo multiple design iterations. Check out our newsletters to get more detailed insights into our progress [here](#).

WHY PARTNER WITH US

International Exposure

AUS Racing competes at Formula Student UK, Silverstone alongside 100+ university teams from 30+ countries, in front of industry names like **Mercedes-AMG HPP**, **McLaren Applied**, and **Aston Martin Cognizant F1**. Sponsor branding travels with the car from Sharjah to one of motorsport's most iconic circuits.

Access to Top talent

A 40+ member, 6-discipline engineering team (mechanical, electrical, business, and more) the same caliber of student engineers UK sponsors like Cosworth, Accu, and MAHLE Powertrain actively scout for graduate roles and internships.

Industry Networking

Current partners include **AGMC** (BMW/MINI/Rolls-Royce importer, UAE), **Ansys**, **DEWESoft** and **Fluid Codes**; sponsors join a proven network, not a first-time pitch.

Formula Student also entertains talent like **David Braham**, **Paddy Lowe**, **Mike Gascoyne** and **Leena Gade**.

SPONSORSHIP PACKAGES

BENEFITS	BRONZE	SILVER	GOLD	PLATINUM
	AED 10,000	AED 30,000	AED 40,000	AED 75,000
Company logo on bodywork	✓	✓	✓	✓
Company logo on team shirts	✓	✓	✓	✓
Acknowledgement on publications like newsletters	✓	✓	✓	✓
Company logo on website	✓	✓	✓	✓
Invitation to team events	✓	✓	✓	✓
Company logo and advertisement on working bench in Silverstone		✓	✓	✓
Featured article on website		✓	✓	✓
VIP access to team events		✓	✓	✓
Access to team members and car for promotional content			✓	✓
Featured advertisement on team social media			✓	✓
Access to car for company events			✓	✓
Sponsor branded car livery				✓
Customized branding across all team platforms				✓
High visibility in all team promotional material				✓

In the instance that the agreed sponsorship falls under a non-monetary category, the value of the services or in-kind support provided will be assessed by the team, and an appropriate sponsorship package will be assigned accordingly*
